**If you're** disabled or live far away from a college or other teaching centers, you may wonder how to learn English. You may learn English from anywhere that you have internet access. Online English language teachers and programs can teach you everything you need to speak English properly. Programs like Skype allow you to see your teacher, also, to chat through your computer in real time, so it is like you're physically in a classroom. Many businesses like to have their workers who don't speak English well to take online classes to enhance their performance.

**Companies that have a lot of non-English speakers may enroll their employees in a discount in an online English course.** Instruction can occur at a specified time, or workers can study on their own time. Coursework can be designed for groups or individuals. No matter what the course design is, it's very important to English language students to practice frequently. This is just another reason why a program like Skype helps. You and your friend can talk over the internet if you cannot meet physically because you're in various cities or have odd work schedules.

**To learn English, you'll need to learn vocabulary.** You are going to learn English pronunciation and spelling and practice reading, writing, and speaking English words. Each lesson will build on the lessons that came before, so it is very useful to review before you begin a new lesson. You also need to ask questions, so you're confused as lessons continue. The English language has a lot of exceptions to the basic rules. You may learn these exceptions over time, and it'll

get easier for you. A simple way to practice when you're waiting in line or on a bus would be to carry flash cards. On one side of this card, you can put an English word or phrase, and on the other, you can write the identical word in your native language. Go through the cards as quickly as possible to practice words, phrases, their spellings, and pronunciations.

**You will also need to practice writing and reading English, not simply speaking it, to learn the language.** When you approach the learning process in this manner, you will learn to retain the instruction and be more natural in all three methods of communication in English. With English fluency, you may be able to get a better job or become more successful at the job you have because you can communicate in the world's dominant language of commerce. Teachers may have various suggestions for you about how to learn English. The most important is to learn correct vocabulary and usage initially and to practice frequently.
